

stepahead[®]

Excel

Stepahead Excel is our flagship model and enables you to give your patient the optimum functional foot orthotic possible. It can be used to treat the majority of common foot complaints and can be digitally modified to fit even the most demanding of footwear.

Image for illustration purposes only.

When to specify?

Where accurate and well-controlled orthotic support is required. Excel allows every type of correction to be applied to the foot. Ideal for foot types that have large amounts of movement such as compensatory pronation or supination, along with gait styles that need heel raises.

When treating?

- Mild to severe amounts of pronation or supination
- Sagittal plane dysfunction where heel raises are required
- Severe foot pathologies requiring optimised orthotic control

In which shoes?

- Most casual styles
- Trainers and walking boots
- Work boots and safety footwear
