

An anatomical illustration of a human foot and lower leg, shown in a semi-transparent style to reveal the internal bones and joints. The foot is positioned inside a green athletic shoe. A blue, semi-transparent heel protector is visible at the back of the shoe, resting on the heel. The background is black, making the colorful anatomical and shoe elements stand out.

## Heel Protector

Stepahead HeelProtector is specifically designed to relieve the symptoms of heel pain where point tenderness is experienced on the plantar surface of the heel. A rigid orthotic shell offers support to the soft tissues of the medial arch with a soft heel plug cushioning the main area of the pain.

Image for illustration purposes only.

### When to specify?

Where acute plantar heel pain needs to be cushioned with soft padding while maintaining functional control.

### When treating?

- Acute plantar heel pain

### In which shoes?

- Most casual styles
- Trainers
- Walking boots
- Work boots and safety footwear
