

stepahead®

Performer Kit

The Stepahead Multi Fit Performer Foot Orthotic System is a revolution in functional foot orthoses. It bridges the gap between pre-fabricated and bespoke orthoses by using cutting edge CAD technology. This technology allows the practitioner to have FULL control over the design of their orthoses whilst ensuring that they will fit the patient and, just as importantly, the patient's footwear.

Key benefits:

- Bespoke type prescriptions such as deep heel cups, inverted pours, medial heel skives and many more are available without taking a cast
- You and the patient can get a 'feel' for the orthoses prior to dispensing by using the simple Stepahead Multi Fit Performer Kit
- You have total control over the dimensions of the orthoses including width, length and arch height – there are NO limits to what you can achieve
- Available in direct milled polypropylene and EVA for excellent durability and repeatability with a full range of top covers and padding
- Low cost and fast turn around
- Polypropylene shells are also available with your own practice name engraved into the shell
